Welcome to the May 2020 edition of In the Boxing Ring

This month, we are talking about the Box Office User Management system. This is a little known, but powerful feature of Box Office that provides IT Administrators the ability to maintain their user accounts without requiring SOC involvement. On pages 2 to 3, we discuss this further and highlight additional features provided by the system.

In other news, Network Box has published an executive summary video titled, ‘Are you protected from cyber threats?’ And in this month’s Media Coverage, Network Box was featured in numerous media outlets, including: CNN Business, American Chamber of Commerce HK, RTHK Radio 3, South China Morning Post, and HK Institute of Resource Management.

https://www.youtube.com/user/NetworkBox

NOTE: With effect from January 2020 we have switched to a quarterly Patch Tuesday cycle for Network Box 5. However, essential security fixes will continue to be released out-of-cycle, if necessary.
A little known, but powerful feature of Box Office is the ability to provide administrators the ability to maintain their user accounts without requiring SOC involvement.

The feature is enabled by granting the 'customeradmin' right to one or more of your administrators. Once that right is granted, the administrator will see a new **USERS** menu appear in Box Office. The ownership hierarchy will be shown, as well as the user accounts under each owner.

From there, administrators can simply create new Box Office users, modify or delete existing users, and reset passwords. Dual Factor Authentication can also be enabled on a per-account basis from this system.

---

**Within this system, there are a few other useful features, including:**

- Each user account can have a flag set to enable/disable configuration changes. If 'config changes' are not enabled for a user, when the user creates/updates a ticket, a warning message is displayed to the SOC engineer to say that the user is not authorized to request configuration changes. Customized text can also be put here to provide detailed information to the SOC engineer on what specifically that user is permitted to request.
- As well as the preferred language, and preferred regional portal, the time zone for the user can also be set. All dates/times in the system will then be presented using the user’s actual time zone.
- Newsletter preferences can also be set on a per-user basis. The user can choose whether they want to receive news releases, technical announcements, security announcements, or any combination.
- The Box Office notification system supports notification via several mechanisms (including Email, App Push Notifications, and SMS). Notifications for each type can be filtered by day/time range and device group.

---

If you need guidance with this or want to enable it for your administrators, please contact your local, regional SOC for assistance.
In today’s heightened cyber-threat landscape, every company, no matter which industry it operates in, needs comprehensive cyber-security. Yet, most organizations are not adequately protected from hackers, viruses, worms, ransomware, and undesirable content, all of which make the Internet so dangerous.

This is where relying on a high quality managed cyber-security service provider, such as Network Box, can make all the difference. Don’t be a victim, outsource your security to dedicated experts, and get your business professionally protected today.
